

## COPPER AGE CYLINDERS FROM PORTUGAL: A DATA BASE

### 1. INTRODUCTION

Numerous objects with a cylindrical shape existing in the Southern half of Portugal, and in a little part of the South of Spain, come from graves and hill-forts. These graves have a very different architectural form but their contexts are analogous.

The cylinders are described or mentioned only in a large bibliography and the only inventory that we know about was made by ALMAGRO GORBEA (1969, 221-264). The study was made in a traditional linear writing with all the lacks that this type of writing involves in these archaeological works.

The cylinders have several dimensions, a specific anthropomorphic iconography, a significant quantity being without any decoration and they are in light colours. In this perspective, the unique solution is to organize a Data Base in which all characteristics of these artifacts will be described. In fact, the computer is a tool which demands stiff rules in the treatment of the information to be used in a suitable form.

This means that the possibility to make the management of big quantities of information permits a more objective and precise interpretation of the facts so, the first necessity of the archaeologists is to organize a lexicon which allows us to describe any object with uniformity and without ambiguities.

Therefore, in the first phase of our work we present a hierarchical vocabulary that describes all cylinders.

In the second phase, each file was typed into the computer and the management of the set was made. The "corpus" has 303 files and the management was made with the programme Access. In the third phase we did the interpretation using the arguments about the context of the objects.

Our results are confronted with M. GIMBUTAS' last interpretation about this subject (1989, 1991).

### LEXICON

#### A. LOCALIZATION

##### 1. Space

- 1.1 Province
  - Estremadura
  - Algarve
  - Ribatejo

- 1.2 District
  - Lisboa

- calcareous
- clay
- marble
- bone
- others

#### 2. Dimensions

- 2.1 Height  
- (centimeter)
- 2.2 Diameter  
- (centimeter)

### 2. COMMENTARY

The lexicon was organized into three chapters, LOCALIZATION, ANATOMICAL ELEMENTS and GENERALITIES. Each of them was divided into several sections and subsections. These describe the elements of cylinders.

**LOCALIZATION:** the space is indispensable to know the provenance of cylinders. The describers are the geographical divisions of Portugal.

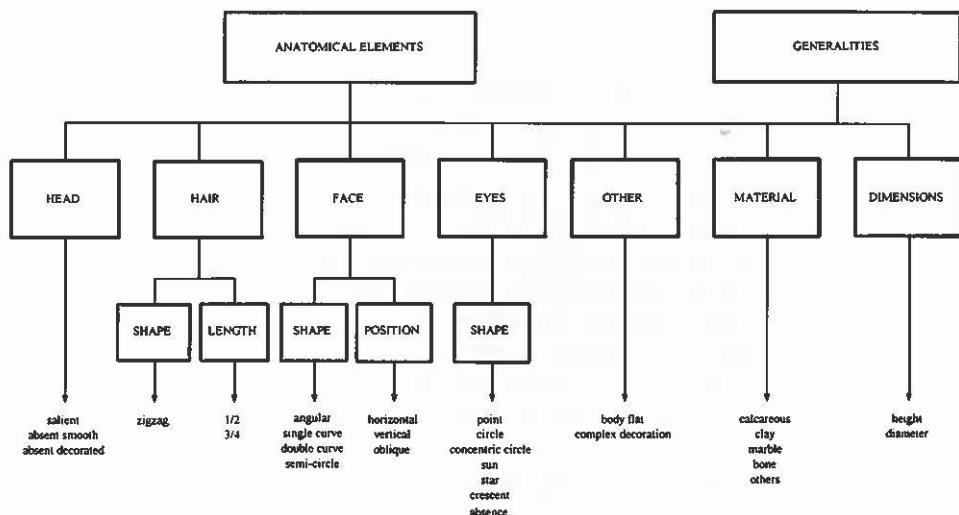

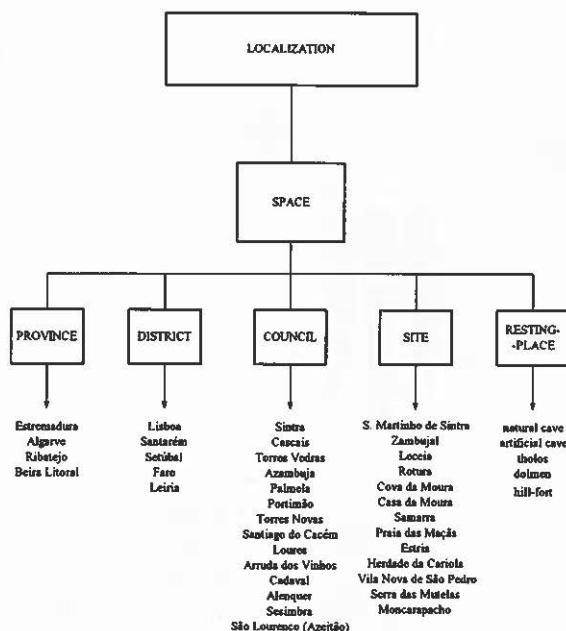

**ANATOMICAL ELEMENTS:** these are organized according to divisions of the human body: head, hair and face. This procedure was adopted because some of them have an anthropomorphic shape.

Some describers are accompanied by a drawing to clarify the name such as: the absence of a smooth cylinder, etc.

The describers of the iconography of the face were the most difficult choice because the signs are very diversified. This section has two important descriptions: shape and position. These elements are presented on a picture with a double entrance where we show the signs of the eyes and the face.

In the section called "other elements" we register the cylinders with a special iconography because they are unique.

**GENERALITIES:** this chapter describes the sections about the material and the dimensions. The vocabulary is written in a hierarchical form which we show graphically on the following sheet.

### 3. GIMBUTAS' INTERPRETATION

The last interpretation that we know about the cylinders says that these objects are linked with the concept of the "Eye Goddess", during the Neolithic (GIMBUTAS 1989, 54).

The argumentations to justify this thesis are the following:

- a1) The West European Eye Goddess is known almost exclusively from se-pulchral artifacts – either as a large stone stela standing at the entrance to megalithic tombs, or as a figurin, bone phalange, stone cylinder, or schist plaque deposit within;
- a2) The West European Eye Goddess of France, Spain, Portugal and Great Britain came from megalithic cultures dating from the 5th to 3rd millenia B.C.;
- b) These figures are connected with the stiff nude ladies made in light colour materials and placed in the graves;
- c) The round eyes established her identity because often no auxiliary anthropomorphic features were deemed necessary;
- d) The cylinders were diffused from the Near East (according to Crawford) crossed the Mediterranean and arrived to Western Europe (GIMBUTAS 1989, 204).

The similarity resulted, probably, from a universally held symbolic concept of Divine Eyes, from which western variants developed Gimbutas' foundations to interpret that the Portuguese cylinders do not agree with our results, in many ways. We are showing those graphically.

### 4. OUR ANALYSIS OF RESULTS

- a1) The cylinders were found not only in the graves but also in the Portuguese hill-forts (Vila Nova de S. Pedro and Zambujal etc.). The context of stone cylinders is rarely the same as the schist plaque (Fig. 1).
- a2) The cylinders came above all from the "tholos" not the megalithic tombs (Fig. 1). Whatever the type of graves, the archeological context belongs to the Copper age, initiated by the arrival of the Kurgans.  
When they come from the megalithic tombs the context is always the copper age epoch. In fact, this people used the Neolithic graves to deposit their dead. So, the cylinders are dated from 2500-2100 B.C. to 1600 B.C.
- b) The main raw material used seems to have been the light colour such as: calcareous and bone although the majority of the material is unknown (Fig. 2). This colour represents the Goddess of Death in the agricultural people and the colour black was adopted by the Kurgan people to represent the death (GIMBUTAS 1991, 400).

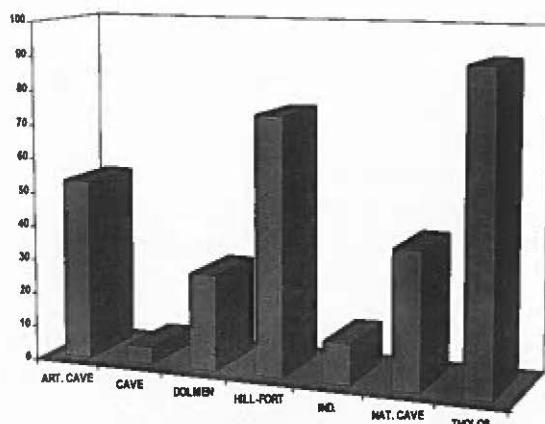

Fig. 1 – Distribution of cylindrical figures by rest place.

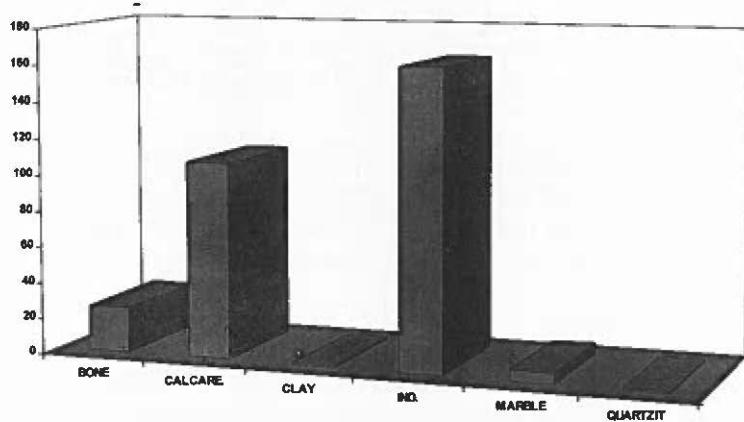

Fig. 2 – Distribution of cylindrical figures by material.

- c) The round eyes in cylinders that show their anthropomorphic features are only 4%. This particularity agrees with Gimbutas' hypothesis but we know that the Kurgans had the sun and the stars as divinities (GIMBUTAS 1991)(Fig. 3).
- d) According to Gimbutas the cylinders come from the Near East, and crossed the Mediterranean but this type of figures appears above all in Spain and Portugal.

## 5. CONCLUSION

The sun was drawn on many objects and stones from the Neolithic to the Iron age. This means that this star was divinized by prehistoric man.

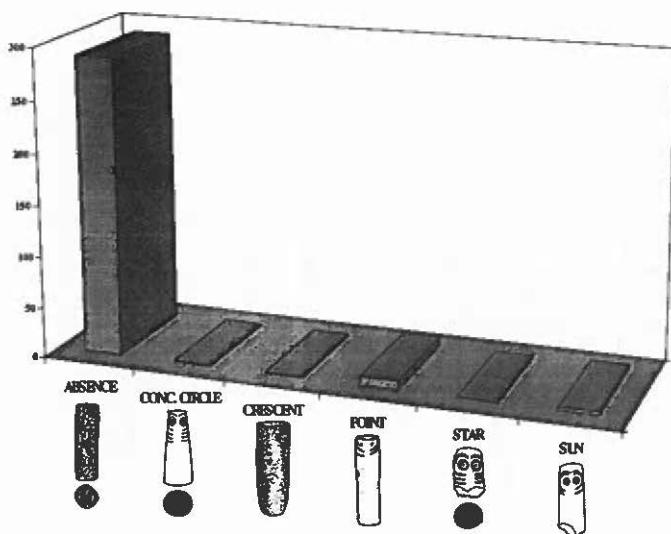

Fig. 3 – Different aspects of eyes-shape in cylindrical figures.

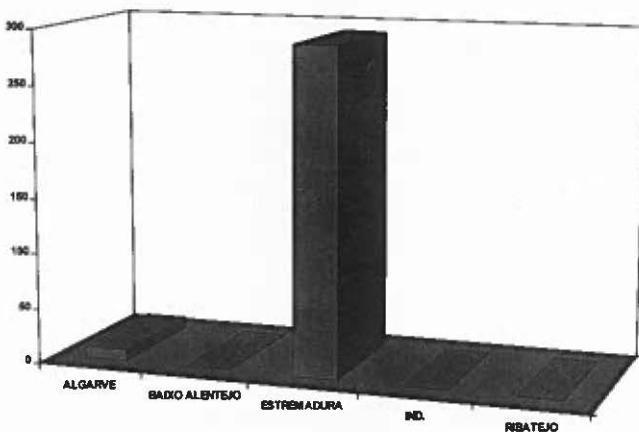

Fig. 4 – Distribution of cylindrical figures by province.

In this perspective the sun assumed a divine universal symbolic concept even if it is not represented.

The Portuguese cylinders from the Copper Age have, probably, a double function as a result of two opposite ideologies:

1. The light colours representing the death of the sedentary agriculturalists.

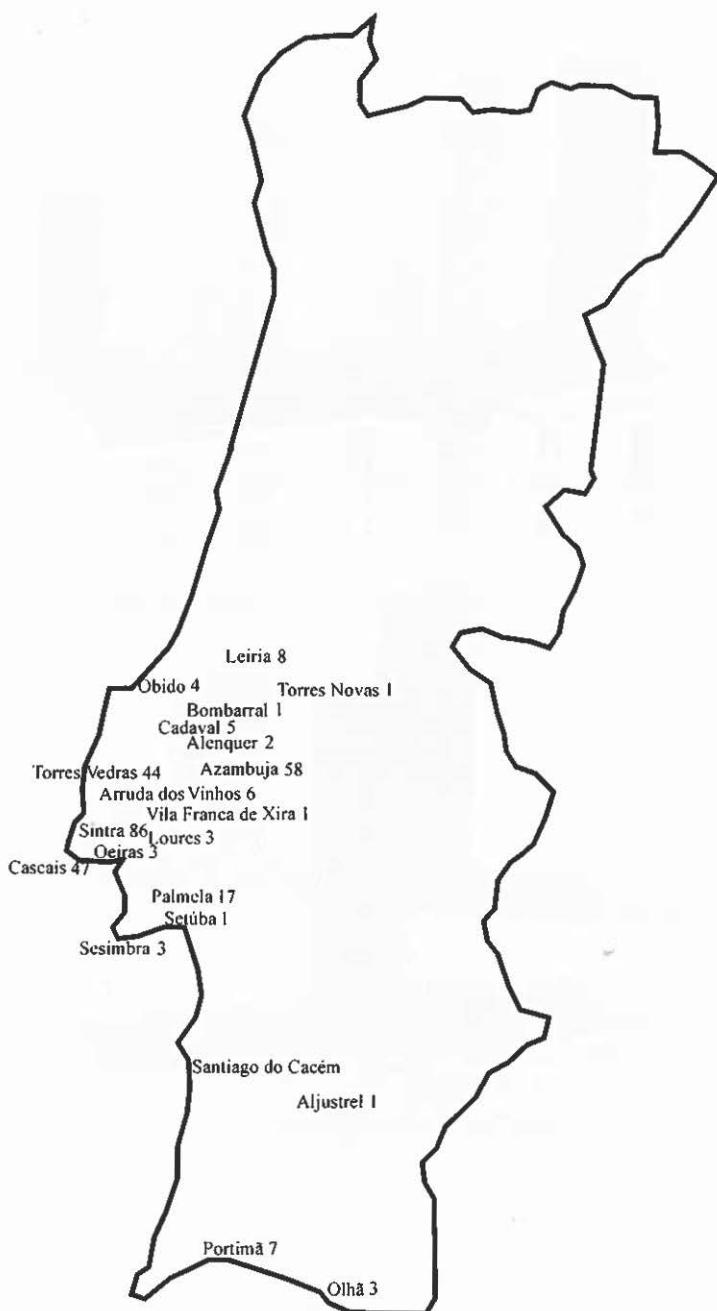

Fig. 5 – Distribution of cylindrical figures by Council.

2. The shape changed from female figurines, to cylinders which represent, probably, a male figure. In fact, the ideology of the Kurgans based on a chiefman did not allow them to accept one female figure as a divinity.

We have some nice examples of statuettes from Spain, in the form of cylinders and bone phalanges. These came from graves of the Copper Age.

This idea was certainly transported from this country to Portugal by sea along the Atlantic coast (Figs. 4 and 5)

## ABSTRACT

The aim of this work is to show a Data Base when we have a great number of archaeological objects. The example is made with 303 figures from Portugal which the archaeologists name "cylindrical idols". In the first place, it is necessary to choose the vocabulary and organize it in a hierarchical form. Our tree form has three chapters, some sections and subsections that form the base of the system; in the second place I adopted the Access programme to describe the cylinders. When the recording was finished, I asked the following list of questions:

- a) What is the provenance of the Portuguese cylinders?
- b) What is the main raw material?
- c) What is their typology?
- d) What is the geographical distribution?

The answers were reproduced with a graphical picture where we can see the results. These results are confronted with M. Gimbutas' interpretation about these cylinders over Western Europe. Our conclusion does not agree with her because in Portugal the figures appear in Copper Age contexts and M. Gimbutas says that the cylinders were used during the Neolithic. This thesis was linked to the concept of the "Eye Goddess", but the Kurgans that seem to have introduced the metal in Portugal held the sun as a principal religious symbol.
